

ABSTRACT OF THE DISCLOSURE

A pressure fryer is provided which can be used as an open fryer as well. A pressure fryer 1 has a casing 2 including an oil vat 4. At the rear of the oil vat 4, a support bar 14 is perpendicularly provided, which is capable of moving upward and downward and turning. A lid 13 is connected in a lateral state to a lateral portion 20 which is provided at the top of the support bar 14. The support bar is located at the upper limit position by the momentum of a spring. With this configuration, the lid 13 can retract from an area above the oil vat 4 by turning the support bar 14 in either right or left direction.
